**BRAIDING MACHINE Carrier.** 805,910. Rudolf Hantusch, New York City.

**CARDING MACHINES.** Lap Feeding Device for. 805,934. Charles Schofield and Isaac Reeder, Philadelphia, Pa., assignors to William Schofield Co., of Philadelphia.

This invention relates especially to the means employed for receiving the web or fleece from the

delivery-apron of the first carding-machine, and conveying it to and lapping it upon the transverse conveyer-apron. The purpose of the invention is to effect such conveyance of the web without injury thereto and to impart to-and-fro motion to the devices which direct the web on to the transverse conveyer-apron and also feeding or carrier movement to said devices without the use of any supporting rail or carriage for the laterally-swinging member of the device, without any direct connection with the carding-machine, and without any connection thereto which will prevent free access to all parts of the lower portion of the device or to the web which is being acted upon.
