PART I.—INTRODUCTORY

	PAGE
FOREWORD	v
PREFACE	vii

CHAPTER I

TRADITIONAL LOOMS TO WHICH THE NEW DRAW-LOOM IS CLOSELY RELATED	3
The new draw-loom embodies ancient principles—Gradual development of weaver's craft and appliances—The harnesses of ancient looms—Simplicity of essential principles—The industrial revolution: its character—Its effect on textile industry—The domestic changed to factory system of manufacture—Introduction of Jacquard machine: its effect	

CHAPTER II

THE DRAW-LOOM OF TRADITION: ITS DESCRIPTION BY A MASTER WEAVER OF 1800	7
The draw-loom in 1911, as described by John Murphy—Murphy's description—The new draw-loom compared with that of 1911—Modern additions to the draw-loom	

PART II.—CONSTRUCTION

CHAPTER III

THE FRAME OF THE NEW DRAW-LOOM	15
The mountings—The wood for loom frames: its nature—Designing loom frames for factories—Designing individual looms—Special feature of draw-loom frames—Construction of loom frames—The rollers—The baton—The reed frame—The reed holder: its careful construction—The cross-piece of the loom frame—The breast roller—The back rollers—The ties of the loom frame—The treadles	

CHAPTER IV

THE SINGLE-THREAD DRAW-LOOM HARNESS	25
The draw-loom monture—The limitations of the ordinary hand-loom harness—The thread monture—The comber board: its importance—Construction of comber board—The comber slips—Design of repeats on comber board	

CONTENTS

CHAPTER V

	PAGE
THE PULLEY BOX	32
The pulley box and its position in the loom—The limitation of the monture—Description of monture—The comber slips—The bottom board of the pulley box—The pulley supports—The pulleys	

CHAPTER VI

BUILDING THE MONTURE	38
Preparations for building the monture—The lingo—The lingo couplings—The short couplings—Making short couplings by hand—Attaching the lingo—Handling the couplings—The building frame couplings—Spreading out and moving couplings to comber board—Method of handling "Trade" couplings—The necking cords—Making compound necking cords—Preparation of pulley box for joining necking cords—Preparations in pulley box—Hanging short couplings in comber board—Joining couplings to necking cords	

CHAPTER VII

THE PULLEY CORDS, THE SIMPLE, AND THE LASHES	55
Reference to John Murphy's illustration—Pulley cords of new draw-loom—Two persons needed for joining necking and pulley cords—Preparation of the loom for joining the complete couplings—The pulley cords must be double—The joining—The "simple"—Mounting the simple cords—Inspecting the joined complete couplings—The "lashes"—Chinese loom at Wembley described—Preparation of simple for tying up designs—Monture described only typical	

CHAPTER VIII

THE SHED-LIFTING APPLIANCE FOR HAND OR FOOT	66
Comparison of new and ancient shed-lifting apparatus—The new shed-lifter described in detail—The complete shed-lifter illustrated in detail—Shed-lifter in use—The catch at rest and in use—Regulating the shed as to height—The roller of the simple—The shed-lifter actuated by the foot—Details of the pusher—The fixed and sliding bars—The saddle of the pusher—The connexion of the pusher with its treadle—The treadle stop for holding an open shed	

CHAPTER IX

DESIGNS AND READING-IN ON "SIMPLE"	76
Ruled paper designs must agree with the monture—Width of repeat <i>fixed</i> , height <i>ad libitum</i> —The <i>unit</i> of design on <i>ruled paper</i> —Examples of design—Reading-in and tying up	

CONTENTS

PART III.—VARIATION

CHAPTER X

	PAGE
THE TABLE-LOOM AND EARLY TYPE OF DRAW-LOOM	87
Origin of new draw-loom—Utility of table draw-loom—New draw-loom No. I—Important alterations required—The "Simple" and its fittings—The headle frame and the comber slips—The headle cords, the pulley cords and the simple cords—Building the monture of the draw-loom—The shed-lifter of draw-loom No. I—Work produced on draw-loom No. I—Nature of twines and cords used in all draw-loom	

CHAPTER XI

NEW DRAW-LOOM NO. II FOR COMPOUND WEAVING	99
Compound weaving: its great scope and utility—Compound weaving on No. I draw-loom—Advantages of compound weaving—How two or more harnesses work together in draw-loom No. II—Entering a compound harness—Advantages of lifting two or more warp threads together—Entering comber or point repeat montures—Special table for new draw-loom No. II	

CHAPTER XII

PREPARATION FOR WEAVING ON THE NEW DRAW-LOOM NO. II	110
Draw-loom No. II furnished with warps—Entering draw-loom No. II with ground warp—Entering the pattern warp—Entering both warps in the reed—Tying up both warps in front of the reed—Attaching the warps to the breast roll of the loom—Adjustment of the loom—Final tie-up of warps—The knot for tying up	

CHAPTER XIII

WEAVING ON DRAW-LOOM NO. II	119
Importance of regulating the tension of the warps for pattern weaving—Fixed ratchets and pawls insufficient—The weight box for large looms—Levers, weights and pulleys for small looms—Giving tension to small looms—Why two separate warps are necessary—Designs for new draw-loom No. II—Increasing the unit of design in size—Warp effect weaving described—Binding warp effect weaving at front—Binding warp effect weaving at front and back	

CHAPTER XIV

NEW DRAW-LOOM NO. III FOR WEFT EFFECT WEAVING	126
Less limitations in weft effect than in warp effect weaving—More complicated looms required for weft effects—The harness for weft effects—The diagram of weft effect harness—Healds of the pattern harness—Healds of the ground harness—Relative position of the harnesses—The ground harness in action—The lingoes weight both harnesses—The binder harness—The reed	

CONTENTS

CHAPTER XV

	PAGE
WEFT EFFECT WEAVING ON NEW DRAW-LOOM NO. III	133
Pattern weaving without a binding warp—The work of the binders—Preparation of loom for pattern weaving—Function of the pattern harness in weft effect weaving—Course of the weft in pattern weaving—Testing the pattern harness	

CHAPTER XVI

WEAVING IN WEFT EFFECT DESIGNS AND THE ORDER OF WEAVING COLOURED WEBS	138
Drawing on ruled paper described—Designing—Reading in designs for pattern weaving—Using two or more coloured wefts—Order of weaving ground and pattern—More than one throw of weft generally required to form design unit—Proportion of design must be kept—Changing the binder shoot—A drawing required for each colour in complicated patterns	

CHAPTER XVII

DRAW-LOOM NO. IV	143
Two important inventions adopted in No. IV draw-loom—Side elevation of the loom—Why the comber board was introduced in No. IV draw-loom—The comber board and pulley box of new draw-loom No. IV—Shafts for pattern harness—The short couplings—The bannister knot—Hanging the couplings on shafts—Shafts connected with necking cords—The bottom board of pulley box: its position—Agreement of comber board, bottom board and pulleys necessary—The principles of the "split harness"—Arrangement of pulleys in box—The compound coupling—Position of the binder harness—The cording	

CHAPTER XVIII

THE PULLEY MOTION AND ITS CORDING	158
Superiority of the pulley motion for cording—Pulley motion of draw-loom IV—Pulley motion of pattern harness—Cording the pattern harness—Bearings for rollers of pulley motion—Pulley motion of binder harness	

CHAPTER XIX

TYING UP THE SIMPLE FOR A DESIGN AND WEAVING A BROCADED TISSUE ON NEW DRAW-LOOM NO. IV	162
Larger repeats of design possible on draw-loom IV—The tie-up for brocading—Brocading with needles—Reading in the tie-up for brocading—Testing the various parts of the monture—Wefting for the brocade—All shuttles and needles must follow in regular order and direction—Order of weaving brocade—The first shed—The first colour shoot—Order for the second shoots of weft—The movements for brocading tabulated—Brocading with small shuttles	

CONTENTS

PART IV.—SPECIFICATION

CHAPTER XX

	PAGE
SPECIFICATION NO. I FOR A FULL-SIZED SINGLE-THREAD NEW DRAW-LOOM FOR FINE LINEN DAMASK WEAVING	177
Simplicity of the new draw-loom monture—The first full-sized new draw-loom described—The comber board frame—The design of the comber board—Entering arrangements—Point repeat, special entering for—The bottom board of the pulley box—Arranging the pulleys in their box	

CHAPTER XXI

SPECIFICATION NO. II	186
Description by the owner of the loom—Height of loom—Width—Portability—The wood—Detaching loom from table—Made fast to table—How to be packed for moving—Capacity of loom—Tension of warps—The shedding motion—The pattern shed—The binders—The binder shafts and healds—The floating of the binder threads—Building the monture—Time spent on building monture	

CHAPTER XXII

SPECIFICATION NO. III	193
Requirements in the order for the loom—The count of the silk warp to be used—The diagram of the comber board—The comber slips—Dividing the comber board into portions for borders and filling—The space for the four comber repeats—Entering of the two borders—The pulley box: its holes and pulleys—Necking cords for borders—Distribution of necking cords—Control of both borders from one side	

CHAPTER XXIII

SILK DAMASK PATTERN WEAVING	199
The technique of silk damask pattern weaving—Different from all other kinds of pattern weaving—Single thread small patterns—Large designs in silk damask—The shed for damask weaving—The plan and tie-up of headles and treadles of silk damask front harness—Construction of monture for weaving damask—Diagrams of 5 headle satin harness—The harness for 8 headle satin more generally used—Action and reaction of headle and pattern harnesses in damask weaving—Weaving the design in large—Westing a damask web	

CHAPTER XXIV

SPECIFICATION NO. IV FOR A SILK DAMASK NEW DRAW-LOOM	207
Silk damask loom differs from all other pattern looms—Special care needed in handling suitable fine silk—Silk throwing—Dimensions of damask pattern loom—The frame—The rollers—The comber board—The simple—The pulley box—The pulley cords—The necking—The mails—The long-eyed healds of the front harness—The shed lifter—The treadles—The baton
