

Part-time short-term web development for the Program in Applied Math.

The Program in Applied Math is in the process of redesigning their website and one of our graduate lead by a graduate student, who is looking for some help from an undergraduate who knows Drupal 7. It will not be a huge project, but the student would have to have some time to help transfer data from the current site to the new site and various other tasks. To see what has been started so far please check: <http://128.196.226.252/>

If you are interested in assisting with this project for a few hours per week, please contact Stacey LaBorde directly at wileys@math.arizona.edu or 621-4664. They cannot offer any compensation, but the dept. chair would certainly be willing to write a letter of recommendation, etc. They would also be able to offer credit as an independent study course if that's something that would be of interest.
