

```
bool lock = false;           /* shared lock */
process CS[i = 1 to n] {
  while (true) {
    while (TS(lock)) skip;   /* entry protocol */
    critical section;
    lock = false;           /* exit protocol */
    noncritical section;
  }
}
```
